

Project Executable Files

Date	15 July 2026
Team ID	xxxxxx
Project Name	AI Debt Settlement
Maximum Marks	3 Marks

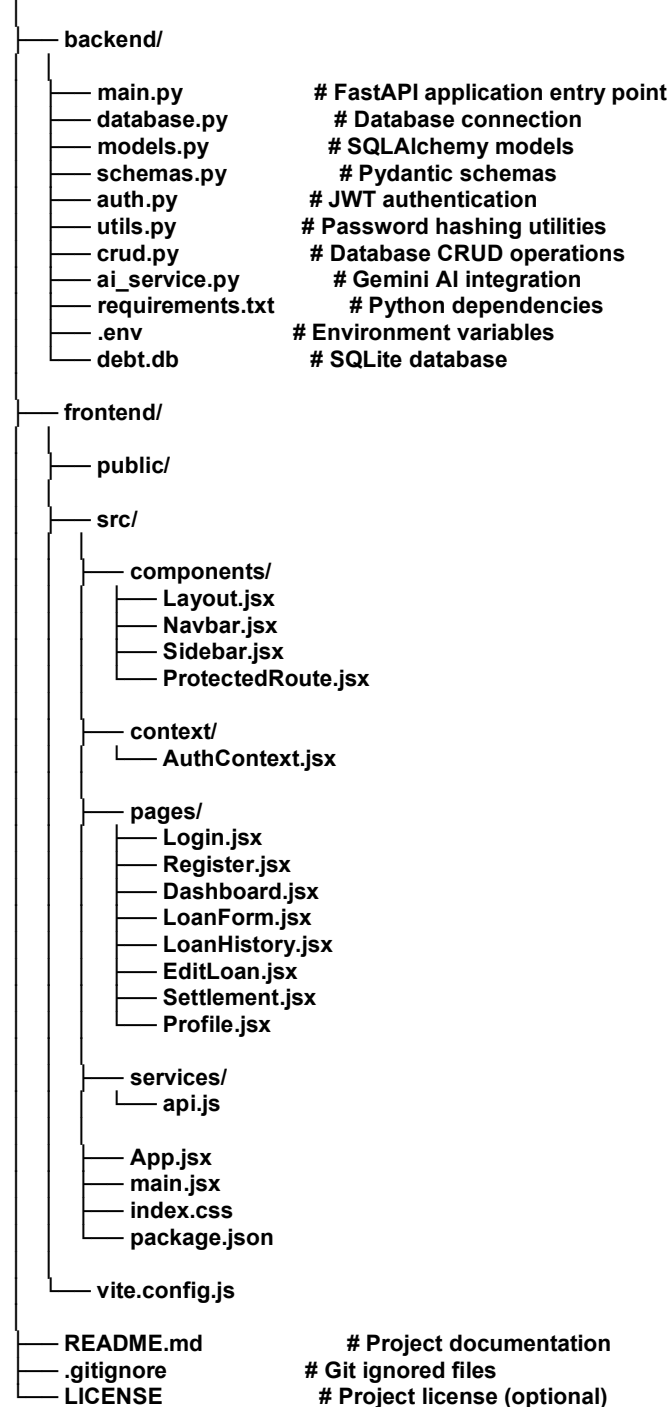

Project Executable Files

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (SQLite Database)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization configuration	NA
9	Test files and test results	Yes
10	Demo video / Project walkthrough	Yes

Step 2: File / Folder Structure

AI-Debt-Settlement-System/

Step 4: Run Instructions

Prerequisites

Before running the project, ensure the following software is installed:

- Python 3.10 or above
- Node.js (v18 or above)
- npm (comes with Node.js)
- Git
- Visual Studio Code (Recommended)

Step 1: Run the Backend (FastAPI)

Navigate to the backend folder:

```
cd backend
```

Create a virtual environment:

Windows

```
python -m venv venv
```

Activate the virtual environment:

```
venv\Scripts\activate
```

Start the FastAPI server:

```
Python -m uvicorn main:app --reload
```

The backend will be available at:

<http://127.0.0.1:8000>

API Documentation:

<http://127.0.0.1:8000/docs>

Step 2: Run the Frontend (React)

Open another terminal.

Navigate to the frontend folder:

```
cd frontend
```

Install dependencies:

```
npm install
```

Start the React application:

```
npm run dev
```

The frontend will be available at:

<http://localhost:5173>

Step 3: Access the Application

Open your browser and visit:

<http://localhost:5173>

Step 4: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	The application currently uses SQLite , which is suitable for development and small-scale deployments but may not perform well with a large number of concurrent users.	Planned upgrade to PostgreSQL/MySQL for production deployment.
2	AI debt settlement recommendations depend on the availability of the Google Gemini API and an active internet connection.	Ensure a valid Gemini API key is configured. Future versions can include offline rule-based recommendations as a fallback.
3	The current system supports a single user role (User) and does not provide separate Admin functionalities such as user management or system monitoring.	Admin dashboard and role-based access control (RBAC) are planned for future enhancements.

Step 5: Known Issues / Limitations
